## ABSTRACT OF THE DISCLOSURE

In a super conductive magnet apparatus

comprising a super conductive coil, a helium containing

volume for containing therein liquid helium to keep a

temperature of the super conductive coil low, and a

vacuum vessel containing therein the super conductive

coil and the helium containing volume, the super

conductive magnet apparatus further comprises a support

body on which the super conductive coil is arranged, a

container cover forming the helium containing volume

with the support body in such a manner that a thermal

energy is capable of being transmitted between the

super conductive coil and the liquid helium, and a

connecting member connecting the support body to the

vacuum vessel so that the support body is supported

through the connecting member on the vacuum vessel.
